#### Multi-Factor Authentication (MFA)

## **Easy Setup Guide (1)**

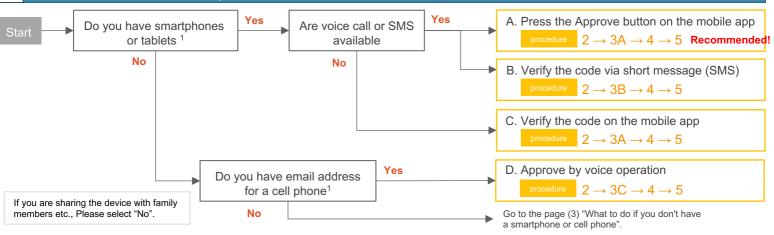

### What is multi-factor authentication for IMC accounts?

- ✓ An IMC account is a number, which is a string of 3 to 8 alphanumeric characters (for staff), lowercasing the first letter of your student number (for student).
- ✓ An IMC account is used for Hirodai mail, VPN access and login for Office365, Teams, etc.
- When accessing from off-campus, authentication by a second factor (a device different from the computer) is  $\checkmark$ required.

The setting depends on the device used as the second factor. Please prepare your smartphone, cell phone, or other second devices.

#### Decide the second factor you use

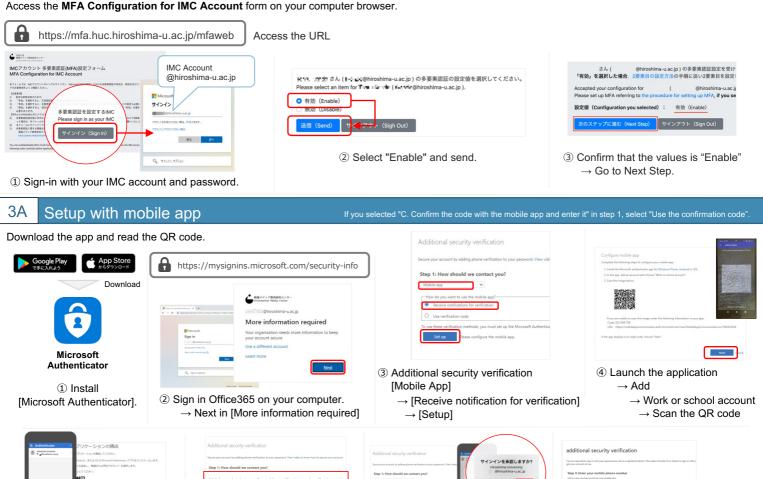

1

2023/3/27 version

#### 2 Apply Multi-Factor Authentication using your personal computer

Access the MFA Configuration for IMC Account form on your computer browser.

- (5) After the six-digit number appears on your phone, click [Next].
- 6 Wait until "Mobile apps has been ..." is display, click [Next].
- ⑦ Tap "Approve" when you receive notification, click [Next].
- ⑧ Enter your phone number in case you need it, click [Next].

<ul> <li>② Additional security verification [Authentication phone]         → [Country/Region]         → [Enter your phone number]         → [Send me a code by text message]         → [Next]</li> <li>✓ [Next]</li> </ul>	<ul> <li>(2) Additional security verification [Authentication phone]         → [Country/Region]         → [Enter your phone number]         → [Call me]         → [Next]         → [Next]         </li> </ul>
<ul> <li>③ When you click [Next], a confirmation code (short message) will be ser to your registered phone number.</li> <li>→ Input number and [Verify].</li> </ul>	<ul> <li>When you click [Next], receive voice call and follow the guidance to operate the phone.</li> </ul>

click [Sign Out] from the profile icon.

#### Confirm the MFA configuration after set up

Finally, let's confirm whether multi-factor authentication actually works. Multi-factor authentication will be skipped when you access from the campus network, so please use an off-campus network (such as home or tethering from smartphone, eduroam, etc.) to check the operation.

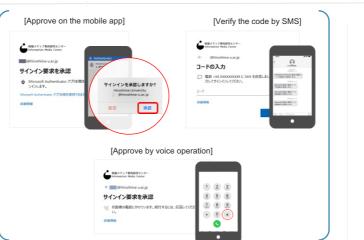

1 Click "Done".

4

※ The following checks must be performed from off-campus network

③ Access Office365 on your computer

④ Authenticate with the second factor

(5) Login completed

#### Please be sure if you use an email client

Hirodai Mail (Microsoft365 Exchange Online) supports advanced/modern authentication (OAuth2.0).

If you want to use your email client after setting up MFA, you will need to set the advanced/modern authentication. You cannot send or receive e-mails without changing the settings.

Advanced/modern authentication is an authentication method that uses a mechanism called an access token to ensure higher security in order to solve the security problems of conventional authentication using IDs and passwords (basic authentication). It is possible to access email service with multi-factor authentication by using mail client that supports advanced/modern authentication.

Thank you for your understanding and to use an email client that supports advanced authentication or the latest Microsoft or Apple email client.

Email clients that support advanced authentication (as of October 2021) Outlook app for iOS/Android, macOS/iOS standard email client, Thunderbird (78.3.1 or later), Becky! Internet Mail (v2.75.02 or later), etc.

#### 3 When in trouble

Is there any way to check the current configuration status?

When sign in an Office365 from an off-campus network (home, smartphone tethering, eduroam, etc.), if you are asked for the second factor, multi-factor authentication is enabled.

- After setting up MFA, I can no longer send or receive Hirodai email. What should I do?
  - ✓ If you are using e-mail software that does not support multi-factor authentication, you will need to set an app password. Please check "Additional security settings (application password)" on the previous page.
- What should I do if I have changed my phone or a deleted the authentication application?
  - ✓ You can skip authentication when you access in the campus network (HU-CUP). Please follow the instructions of "How to add or change the second factor after setting multi-factor authentication" to reconfigure second factor.
- What should I do if I want to disable multifactor authentication due to trouble?
  - ✓ From the campus network (HU-CUP), disable the setting according to Step.2.

How to configure Thunderbird for Oauth2.0 is introduced on the IMC website.

IMC FAQ Site

#### 

Multi-factor authentication can be performed using an extension of the web browser of the computer being used. Please use this service only if you set a login password on your computer and manage it well so that it cannot be used by others.
